

ABSTRACT OF THE DISCLOSURE

One of the amount of induction heating by a coil
and that of induction heating by coils is
increased/decreased relative to the other, and the
5 ratio of the amount of the induction heating by the
coil to that of the induction heating by the coils, at
which the amount of the induction heating by the coil
increases and that of the induction heating by coils
decreases, is set at, e.g., "9:1", and the ratio of the
10 amount of the induction heating by the coils to that of
the induction heating by the coil, at which the amount
of the induction heating by the coils increases and
that of the induction heating by coil decreases, is set
at, e.g., "7:3".
